

CPS

INDUSTRIAL ENGINEERING POLAND LTD.

SMD/THT AUTOMATION MACHINE:

Development and production of machines for the placement of various electrical components. Fuji is offering an advanced-generation factory solution that connects the SMT processes in the „Plan - Do - See” cycle over the network and makes everything from programming to maintenance consistently smarter.

FUJI AIMEX II

FUJI NXTR

FUJI sFAB-D

FUJI NXT III

New Edison

Momentum II Series

STENCIL PRINTERS

Proven high-performance printing in a flexible and easy to use platform.

Vectra Elite & ES

Electra Omni ES

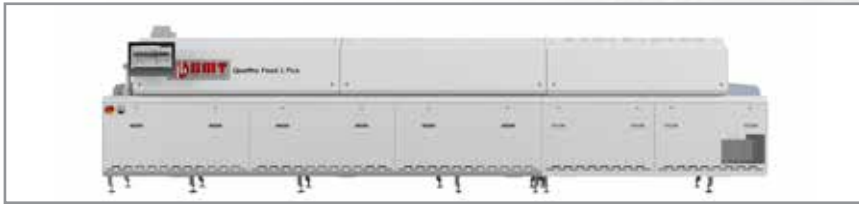

WAVE SOLDERING SYSTEMS CLEANING SYSTEMS

An advanced, precision engineered wave soldering system designed for high-mass and high-volume manufacturers.

SMT - REFLOW / VACUUM OVEN

SMT reflow systems distinguish oneself by long life cycle and high process stability. Innovative developments as process gas cleaning system „ABS“ ensure high system standing times. „Vacuum Plus“ is a system for improving quality of solder joints. Voids are reduced in a vacuum chamber which significantly improves the quality of the soldered product.

CHECKSUM

ICT TESTERS & PROGRAMMING SYSTEMS

Parallel functional test: Single-process ICT, ISP and PFT, Improves Quality and reduces costs.
Fixtures, Programs, Support: PCBA Test Solutions Including ICT, ISP and PFT.
Touchless test: Improve Quality and Efficiencies with In-line and Off-line Test Automation.

PARMI

SOLDER PASTE INSPECTION 3D AUTOMATED OPTICAL INSPECTION 3D 3D AOI SYSTEMS

Xceed 3D AOI

SIGMA-X Orange

„Flying Probe“ on top and bottom side

4-probe tester offline or in-line

TAKAYA CORP.

FLYING PROBE TESTERS

Series comprises test systems for the detection of production defects on assembled printed circuit boards using probes moving extremely fast independently of each other.

SELECTIVE SOLDERING

A wide range of Selective Soldering machines, covering the complexity of global demand for production across electronics, aerospace, and PCB contract manufacturing. By combining engineering experience, software development and innovation, we provide cost-effective and reliable Selective Soldering equipment capable of fluxing, pre-heating, soldering and nitrogen generation.

CLEANING SYSTEMS:

- Cleaning applications:
Stencil cleaning, Screen cleaning,
PCB cleaning,
Solder frame cleaning,
InLine cleaning,
Filter and flux trap cleaning,
Paint frame cleaning,
Squeegee cleaning
- Cleaning machines
- Cleaning accessories
- Cleaning chemistry

SOLDERING ROBOTS:

- Contact soldering
- Laser soldering
- Ultrasonic soldering
- System integration
- From desktop to in-line systems

BOARD HANDLING EQUIPMENT:

- Loaders/unloaders, destacker, PCB cleaner.
- Conveyors
- Work Station
- Buffers
- Traffic controllers
- NG conveyors
- Scanning station Laser Marker,
- Ink jet markers.
- Routers

SMART VISUAL INSPECTION

Fully automated visual inspection solutions for a broad range of production lines and markets.

KITOV SMART PLANNER

SERWIS MASZYN I CZĘŚCI ZAMIENNE:

EXPERT IN MICRO DISPENSING

Musashi Engineering offers a rich and varied lineup of everything from fully automated and specialized dispensing equipment to dispensing heads, controllers, and desktop robots, as well as parts such as nozzles and syringes to match your various dispensing scenarios.
